PROJECTS

- EduSity (University Website):** [Github](#) [Live](#)
 - Users can submit their information through a form that sends data directly to the university authority's Gmail.
 - The website features a sleek, modern design created with React.js and Tailwind CSS.
 - It is 100% responsive, ensuring a consistent experience across smartphones, tablets, and desktops
 - Direct email integration with Gmail facilitates prompt and efficient handling of inquiries and submissions.
- Textica (MERN Stack Project):** [Github](#) [Live](#)
 - Users can browse products and must log in or register to make a purchase.
 - Upon registration, users gain access to an admin panel where they can add new products.
 - The website is built with the MERN stack, incorporating React.js, Express.js, Node.js, and MongoDB.
 - The application uses Tailwind CSS for styling, ensuring a clean and responsive design across all devices.
 - As a single-page application, 'Textica' allows seamless navigation with routing that requires no page reloads.
 - Firebase authentication is integrated for secure and streamlined user login and registration processes.
- Healthy (Doctor's Website using react.js & tailwind-css):** [Github](#) [Live](#)
 - Service Listings: Highlighting the medical services offered.
 - Doctor Profiles: Detailed profiles of healthcare providers.
 - Contact Form: Easy-to-use form for patients to reach out.
 - Responsive Design: Ensuring seamless accessibility across devices.
 - Enabling patients to book appointments directly through the website.
